Portfolio — DevKickstart (npm)

Summary

Software Engineer with **4+ years of experience**. Build scalable backend and full-stack applications using **Node.js, React, Angular, and Python**. Design REST APIs and microservices that power internal business platforms. Develop automation pipelines and AI-driven analytics tools. Use modern AI development tools such as **Cursor, Claude, and ChatGPT** to improve engineering productivity and debugging workflows.

Technical Skills

Languages: JavaScript, Python, PHP

Frontend: React.js, Angular, HTML5, CSS3, Material UI, Bootstrap

Backend: Node.js, Express.js, REST APIs, Microservices

Databases: MySQL, MongoDB

DevOps: Docker, Linux, Git, GitLab

Workflow / Messaging: Apache Airflow, RabbitMQ

Development Process: Agile Methodology, Scrum, JIRA

AI / LLM: Ollama (self-hosted LLMs), AI analytics pipelines

Tools: Cursor, Claude, ChatGPT, VS Code

Experience

Software Engineer

Dec 2021 – Present

Justdial Pvt. Ltd, Bengaluru

- Build internal business platforms using **Node.js, React, Angular, and MySQL**.
- Design and maintain **REST APIs** used by internal dashboards and automation services.
- Deploy containerized microservices using **Docker**. Reduce deployment time by **30%**.
- Collaborate with a team of **10 engineers**. Improve system performance by **40%** and reduce maintenance cost by **25%**.
- Automate operational workflows using **Python and Apache Airflow**. Reduce manual processing time by **50%**.
- Manage backend services and CI/CD deployment pipelines for internal automation platforms.
- Improve production reliability and reduce downtime by **25%** through monitoring and performance tuning.
- Work in **Agile development cycles**. Track tasks and releases using **JIRA**.

Projects

AI-Based Call Analysis System (Internal Platform)

- Build an AI platform that analyzes customer support recordings.
- Process recordings using **Python pipelines and self-hosted LLMs**.
- Perform transcription and sentiment analysis to evaluate customer interactions.
- Design scoring algorithms that measure agent performance and conversation quality.
- Design a **microservice-based architecture** separating transcription, analysis, and reporting services.
- Build automated data pipelines that process large volumes of call recordings and generate analytics dashboards.
- Analyze **thousands of support calls each month**. Reduce manual QA work by **100%+**.

JDLeads – Lead Management Platform

- Develop a lead automation platform that improves lead conversion by **40%**.
- Build dashboards that allow teams to manage **20+ concurrent leads**.
- Automate data workflows using **Apache Airflow** and containerized Docker services.

DevKickstart – Project Scaffolding CLI Tool

- Create and publish a **Node.js CLI tool** that generates project templates for Node.js, React, and Python.
- Design a modular template architecture with interactive prompts using **Inquirer.js**.
- Enable developers to quickly bootstrap projects with standardized structures and templates.

Education

B.Tech in Computer Science

2016 – 2020

SGT University, Gurugram
